

Dog face keypoints — 76 outputs = 39 body + 37 added facial

46 DogFLW facial landmarks. The 9 marked * share a channel with an existing SuperAnimal keypoint - they reuse pretrained weights rather than adding an output - so only 37 channels were added.

ear 14 points

- 0 ear_right_inner_base
- 1 ear_left_inner_base
- 2 ear_right_inner_mid
- 3 ear_left_inner_mid
- 4 ear_right_inner_low

body / skeleton 30 points

SuperAnimal-Quadruped body keypoints:
spine, legs, paws, tail. Not part of the 46 facial landmarks; unchanged by fine-tuning.

Mean face shape over all 4,333 DogFLW images · the animal's right is on the image left
* merged channel: carries pretrained SuperAnimal weights and DogFLW ground truth at once. Ringed in blue on the diagram.
